JRC webinar: Tackling the Scale-Up Gap

Colin Mason
Rapporteur for session 2: Addressing the scale-up gap

5th October 2021
colin.mason@glasgow.ac.uk
Two key challenges for the EU

- It is lagging behind USA/China in scale-ups and its unicorn count
  - Although its performance has been good in recent years, growth has been slower than in US
- Unicorns concentrated in B2B, SaaS for FinTech, e-commerce and market technologies – few scale-ups in hardware and AI
- This is attributed to the lack of large EU-based VC funds able to make ‘big ticket’ investments and investments in sectors that have large capital needs and have a longer time to exit (e.g. AI, clean tech)
- Dependence on overseas (mainly US) investors for later investment rounds.
- Moreover, unicorns and VC are geographically concentrated in certain member states, and within member states in large cities and so are a source of inequality within the EU
Further consequences ....

- Of the lack of later stage investment
  - Acquisition of potential and emerging EU scale-ups by non-EU ‘big tech’ companies and consequent loss of technological successes
- Of less well-funded companies
  - EU companies are less competitive in global markets
- Of non EU investors
  - Pressure from non-EU investors to shift location from EU
- On early stage investors
  - Reduces potential returns for early stage investors (with implications for recycling)
- Research question
  - what is the impact of acquisition on EU scale-ups?
POLICY INTERVENTIONS

• Most intervention has focused on early-stage funding
  – innovation/pre-commercial stage
  – early funding stage
• Current instruments are fragmented at regional and national levels
• EU VC industry has a high dependence on public sector funding
Policy - continued

• Need for intervention to create a small number of funds capable of making ‘big ticket’ investments
• Should be private-sector led, not based on public money
• Public sector support should be designed in a way that helps the growth of private sector VC
• Challenge – how to attract investors?
• What structure – mega fund-of-funds?
• Current thinking: ESCALAR
• Need to increase representation of female VC partners
  – Positive effect on fund performance
  – More likely to invest in women entrepreneurs
Finance is only part of the solution

• Other critical areas of intervention are:
  – Sufficient quantity and variety of funding earlier in the financing pipeline
  – Supportive entrepreneurial ecosystems
  – Regulation (effect on uncertainty)
  – Harmonisation of regulation, taxation, funding across the EU
